10th (SSC)
9.5/10

Skills

- Java
- HTML
- CSS
- Javascript
- React js

Projects

- **Single axis tracking solar system**
The Aim of the project is to generate electricity during day time.
In this system the solar energy is converted into electrical energy.
The sun rises from east to west.
In this system there will be a sensor which can detect the direction sunlight.
According to sunlight direction the sensor will be tracked.
